HAND MATES

IMPROVE PRODUCTIVITY

Hand~Mates™

SUPPORT GLOVES

Hundreds of Uses Including...
Sewing & Quilting, Craft & Hobby Work, Computer Use, Assembly Work, Food Processing...and more!

Hand~Mates™ Provide...
Massage / Heat/ Support
Relief from Nagging Aches and Pain

Should be used any time repetitive hand motion causes fatigue to hands or wrist.

Start your day by putting on Hand~Mates™ and your hands will feel more comfortable and relaxed than ever before!

Heat...

Naturally generated by the body, warmth is retained within the tightly knit fabric. This keeps muscles relaxed and stimulates circulation.

Support...

Just like what support hose do for legs...Hand~Mates™ comfortably reinforce the palm and wrist – leaving your fingers free to handle your work.

Massage...

The gentle “give and take” of the fabric keeps muscles free from fatigue and promotes better circulation...

Insert your ring and middle fingers together through the center hole.

Hand~Mates™ can be worn under protective or sport gloves.

Washable
88% Nylon / 12% Spandex

GLOSSARY

Knife-Edge	The bottom blade is ground to a standard 20 degree bevel. The top blade bevel is increased from 30 degrees to 50 degrees. The easiest cut but sacrifices edge life.
Hot Drop-Forged	Construction process that provides sturdiness and lasting sharpness. Tempered and hardened scissors can be sharpened again and again.
Inlaid (Wiss)	Precision construction process that offers extraordinary edge properties for high performance and features the "Easy-set" pivot.
Scissors	The finger bows are identical.
Shears	The finger bows are NOT identical, or any scissor over 6" in length.
Compound Action	The insertion of gears or levers to mechanically multiply the cutting power of the shears.
Ice Tempered	A special hardening process to extend the life of the cutting edge.

The WISS Quality Story

The name WISS has been synonymous with fine quality shears and scissors since 1848. This position of eminence is unparalleled in the industry and has been achieved by maintaining a standard of manufacturing excellence that has made WISS a household word in this country and throughout the world.

The manufacture of WISS shears and scissors begins with the finest quality cutlery steel and a knowledge of metallurgy achieved from years testing and analyzing these products at every stage of production.

The combination of this with the dedication and experience of skilled craftsmen, is responsible for the cutting edge superiority that has established WISS shears and scissors as the standard of excellence in the industry.

GOLD SEAL

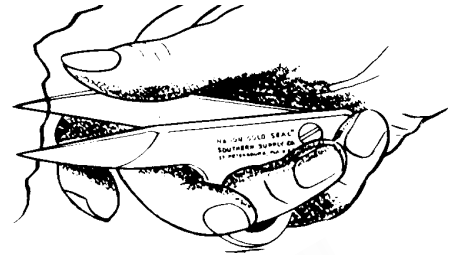

Since 1927 GOLD SEAL has been filling the need for fine industrial cutting instruments. Scissors and shears are designed, engineered and manufactured in the USA to satisfy the demand for continuous use. GOLD SEAL patented and introduced the "Ball Bearing" thread nipper which has become the recognized standard of the industry. GOLD SEAL also introduced the "Knife Edge" grind for shears, scissors and thread nippers.

All GOLD SEAL shears, scissors and thread nippers are made of special high carbon steel, hot drop-forged and then hardened and tempered to exact specifications for outstanding durability and edge retention. After assembly, each pair is individually adjusted and subjected to demanding tests for cutting abilities.

BALL BEARING NIPPERS

Gold Seal "precision" made thread nippers are used in many industrial applications. They are fast, efficient and convenient for any light cutting operation. The nipper fits the hand comfortably leaving fingers free to handle the material.

"Ball Bearing" construction for smoother, easier operation and increases the life of the nipper.

Thread Nippers are "worn" in hand leaving fingers free to handle material.

POLYMER COATED

Constructed with special blue polymer coating having unique properties and advantages:

- Tough polymer coating will not react to acids and salt in skin.
- Very low coefficient of friction, thread and debris slides off nipper more readily and improves ride.
- Superior corrosion resistance - will not migrate under coating.
- Eliminates contact allergies - prevents dermatitis.
- High visibility color - easy to locate.

Fiskars has a tradition of quality that dates back to 1649 when they began manufacturing in the village of Fiskars near Helsinki, Finland.

In 1960 Fiskars revolutionized the scissors and shears industry. After years of intensive research and testing, Fiskars introduced lightweight, orange handled scissors with stainless steel blades that were efficient, long-lasting molded handles conformed to the contour of the hand.

Today, Fiskars continues with the same high standards in improving comfort and performance, with innovative, ergonomic and superior quality products.

A SEWING MACHINE IS ONLY AS GOOD AS THE NEEDLE IN IT!

The Organ Needle Company works closely with all of Japan's sewing machine builders to design and manufacture needles for optimal performance. A machine builder cannot afford to buy an inferior needle at any price!

Next time you order replacement needles for your best machines, order the needles your machine builder uses. When you buy **ORGAN** needles for their outstanding performance you get their *low price* as a bonus.

Would any machine builder jeopardize his reputation by supplying an inferior needle with his machine? How much could he save, .10 or .20 per needle, \$1.00 or \$2.00 per machine? The price of a needle is not a factor to him -- *PERFORMANCE is the factor!* Price is an added benefit, a bonus you always get with every box of **ORGAN** needles.

ORGAN needles are supplied with every new machine from:
BROTHER, JUKI, MITSUBISHI, YAMATO, KANSAI, PEGASUS, CONSEW, TAJIMA, BARUDAN, NAKAJIMA, KINGLINE, NEWLONG, TOYOTA, RENOWN, and many more...

After you've used-up the *free* needles packed with your new machine, which performed flawlessly, WHY change to a more expensive needle? What can you gain? How could any needle at any price be better than those made to the machine builder's specifications? How could a copy, even a more expensive copy, be better than O.E.M. specs?
